SUMMARY

AI engineer working across agentic backends, real-time voice systems, and edge/on-device ML. Builds production Django/FastAPI systems, speech pipelines, and optimized computer-vision models; published researcher in AI nutrition and open-source contributor to voice synthesis tooling.

EDUCATION

Rajshahi University of Engineering & Technology (RUET)
B.Sc. in Mechatronics Engineering

Rajshahi, Bangladesh
Mar 2022 – Aug 2026 (Expected)

TECHNICAL SKILLS

Languages: Python, C/C++, Dart, Rust, Swift, SQL
Frameworks & Libraries: FastAPI, Django, Flutter, PyTorch, TensorFlow, MLX, LangChain, HuggingFace
Databases & Infra: PostgreSQL, Supabase, Redis, Firebase, Docker, WebRTC, LiveKit, FastRTC
AI / ML: Agentic LLM workflows, RAG, ASR/TTS/VAD, YOLO, stereo depth, TFLite, ONNX, MLX, quantization

EXPERIENCE

Intelsense AI
Backend Engineer

Apr 2024 – Present
Remote

- Own the backend architecture for an AI-powered SaaS platform, designing **Django/PostgreSQL** systems with a focus on modularity, reliability, and scale
- Integrated production **LLM, ASR, and TTS** inference pipelines into the web backend, enabling real-time AI voice and text interaction features at the product layer

Cortex Technologies
ML Engineer

Jan 2024 – Present
Contract Collaboration

- Own the ML engineering track for client projects sourced through a small freelance collaboration, building custom object detection pipelines, stereo depth estimation, and real-time edge-vision inference
- Build LLM automation components for client workflows, covering model selection, prompt/tool orchestration, quantization (TFLite/ONNX), and deployment on edge devices

Outlier / Remotasks
AI Trainer & LLM Data Quality Reviewer

Jul 2023 – Dec 2024
Remote

- Reviewed AI-generated math/code solutions and audited multilingual programming datasets for model reasoning and code-generation fine-tuning quality

PROJECTS

Gesprek | FastAPI, PostgreSQL, Redis, Supabase, Docker, ElevenLabs, LiveKit

Archived

- Built and deployed a **production-ready voice-agent platform** with configurable multi-agent workflows, Supabase auth, Redis-backed real-time TTS, subscriptions, and containerized services
- Engineered multi-tenant agent orchestration and independently scalable services; later archived after feasibility validation due to market and infrastructure constraints

StereoLite: Lightweight Stereo Depth Estimation | PyTorch, ONNX · B.Sc. Thesis

Active

- Designed an **under-3M-parameter** stereo depth model that is **10×+ smaller** than DEFOM-Stereo (30M+ params) and requires **4× less VRAM** (1.5 GB vs. 6 GB), achieving EPE 0.57 in 1 600 training steps
- Decoupled iterative multi-scale GRU refinement from a frozen DINOv2 backbone, reducing compute and memory cost while preserving depth-refinement quality

Hishab: Agentic Expense Tracker | *Flutter, FastAPI, Supabase, SQLAlchemy*

May 2024 – Aug 2025

- Built a production Flutter + FastAPI app that converts Banglish natural-language prompts into structured financial records using **agentic tool-calling workflows**
- Implemented Supabase row-level-security auth, SMTP notification flows, SQLAlchemy persistence, and a companion web client

Diet Engine: AI Nutrition Coach | *Flutter, FastAPI, PyTorch, Firebase*

Feb – May 2024

- **Published** peer-reviewed research in *Food Chemistry Advances* (Elsevier, 2025) on real-time food recognition and personalised nutrition; built the Flutter client, FastAPI/PyTorch inference server, and Firebase auth

ACHIEVEMENTS & ACTIVITIES

- **JAXA Kibo Robot Programming Challenge 2025: 1st place, Bangladesh regional; 4th place globally;** programmed Astrobees robots for zero-gravity navigation and AR object recognition aboard the ISS
- **Microsoft / VibeVoice:** Contributed package-import support to a 40k+ star emotional voice-synthesis repository
- **Leadership:** Codeforces rating **1280** (Pupil); led RUET coding club and taught C/C++ problem-solving to first-year students; runs Rahi 404 technical YouTube channel
